## 音箱处理器

为了更能与音箱配合，发挥最理想，最快捷的控制效果，我司最新开发研制的40bit比特，带PC控制软件，可实时同步控制音箱的控制器DX系列，终于投入市场，使我们的音箱可以发挥更加完美理想的效果。我们在面板上，设置快速一键呼出功能菜单键，使一些经常需要修改的参数如音量Volume,均衡器EQ,分频设置Crossover,压限器Limiter,输入信道Input Channel, 主系统参量System等，使用户在没有PC控制的情况下，也可以轻松，快捷的进行参数修改。

DX音箱处理器，为适应不同场合使用要求，设计出不同场合使用配置。DX360 3路输入(左|右+中置或超低频信道)2或3分频输出。DX480 4路输入，8路输出适合大型演出及分组控制系统。

除了有多种不同配置之外，如果配合专用PC计算机控制软件可使DX系列功能更为强劲、快捷、完善，使您的专业音乐系统更能发挥至完美的境界。

The DX series is a digital loudspeaker management system designed for the touring or fixed sound installation markets. The absolute latest in available technology is utilized with 32-bit (40-bit floating point) processors and high performance 24-bit Analog Converters. The high-bit DSP prevents noise and distortion induced by truncation errors of the commonly used 24-bit fixed-point devices. A complete set of parameters include I/O levels, delay, polarity, 6 bands of parametric EQ per channel, multiple crossover selections and full function limiters. Precise frequency control is achieved with its 1 Hz resolution. Inputs and outputs can be routed in multiple configurations to meet any requirement. The DX series can be controlled or configured in real time on the front panel or with the intuitive PC GUI accessed via the USB or RS485. Software upgrade for CPU and DSP via PC keeps the device current with newly developed algorithms and functions once available. Multiple setup storage and system security complete this professional package.
